Hypotheses

1. Individual differences exist in *cognitive performance*
 - Jaeggi, Buschkeuhl, Shah, & Jonides (2014)
2. Individual differences exist in *brain functioning*
 - Raz et al. (2005)
3. These changes are *correlated* in this study
 - Kane & Engle (2002)
 - Raz et al. (2010)
 - Kanai & Rees (2011)

REAL DATA

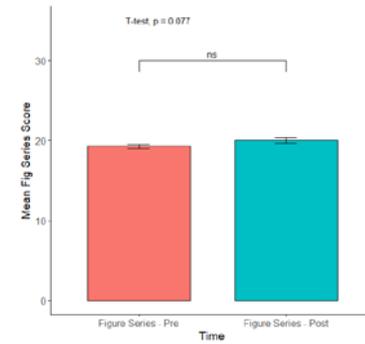

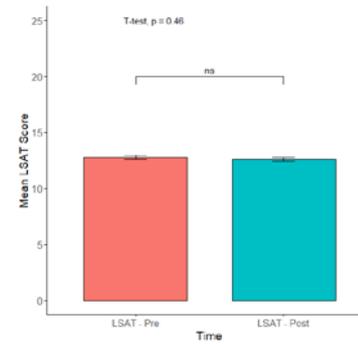

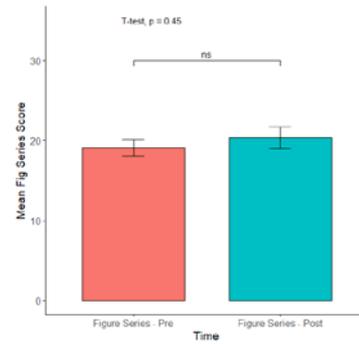

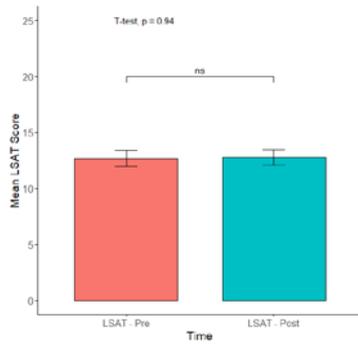

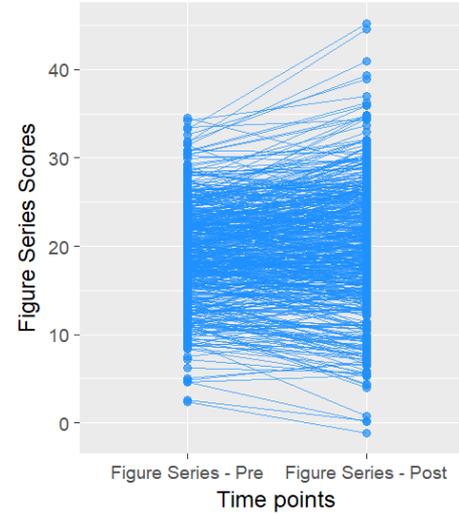

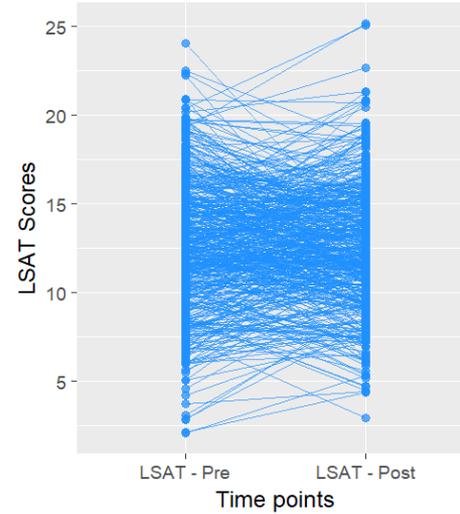

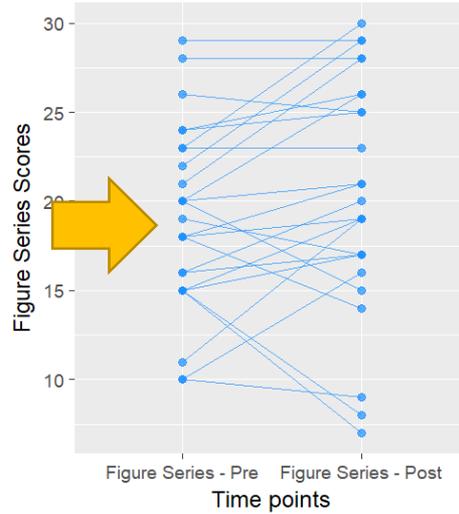

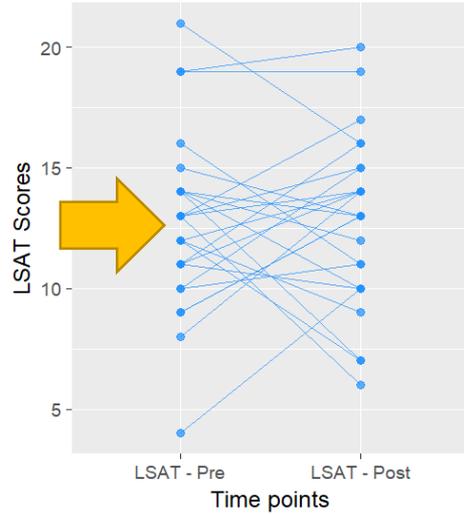

SIMULATED DATA

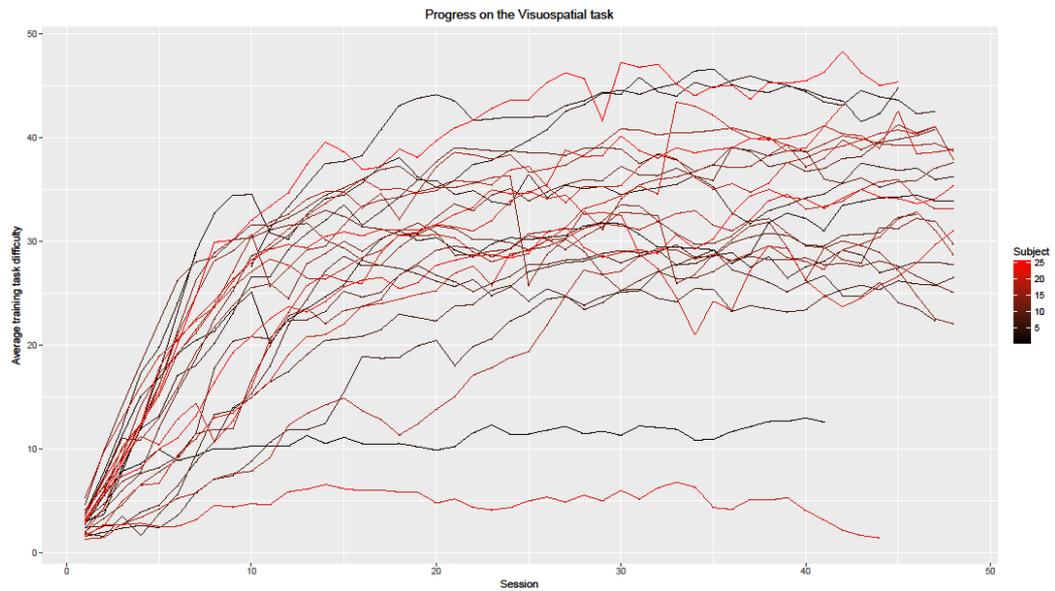

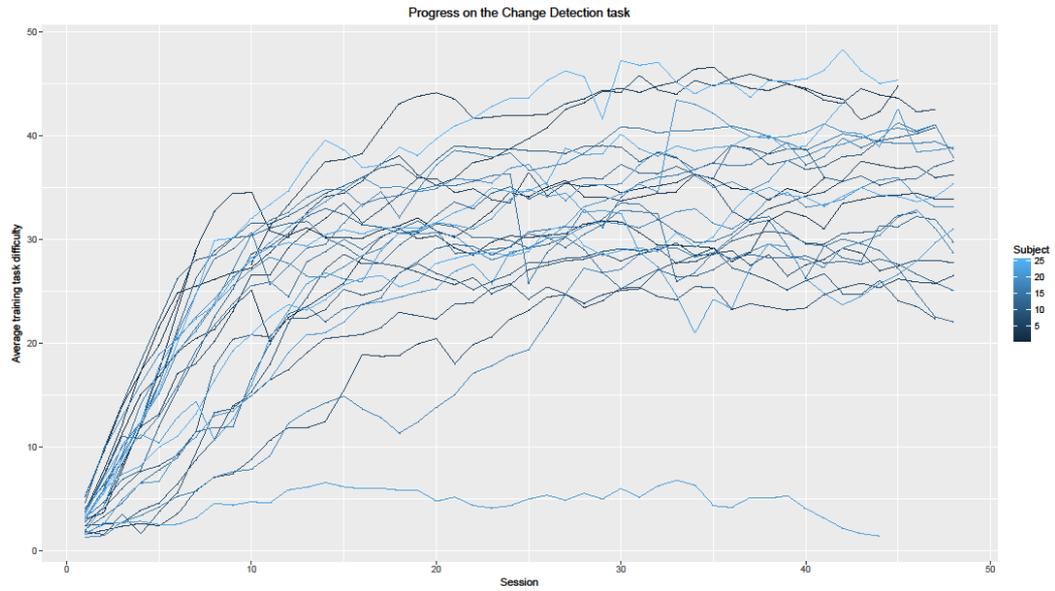

LSAT Reasoning

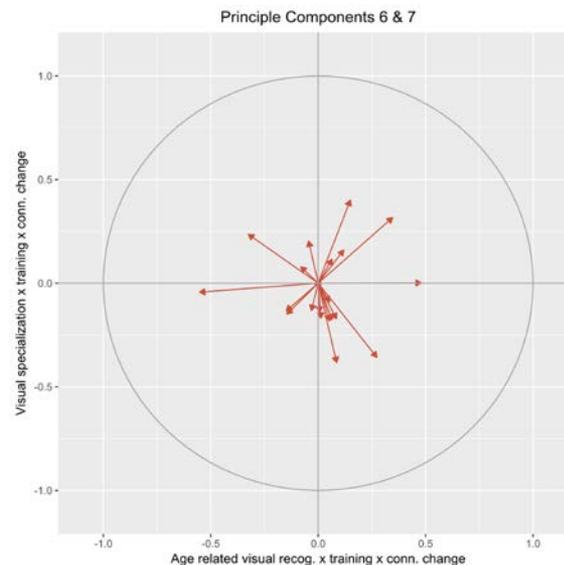

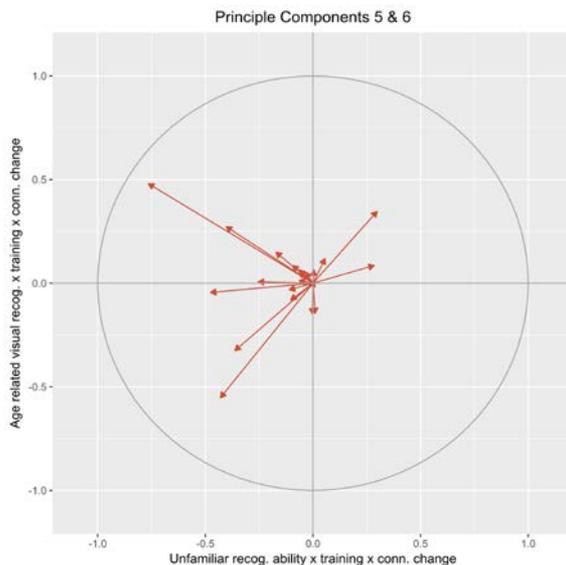

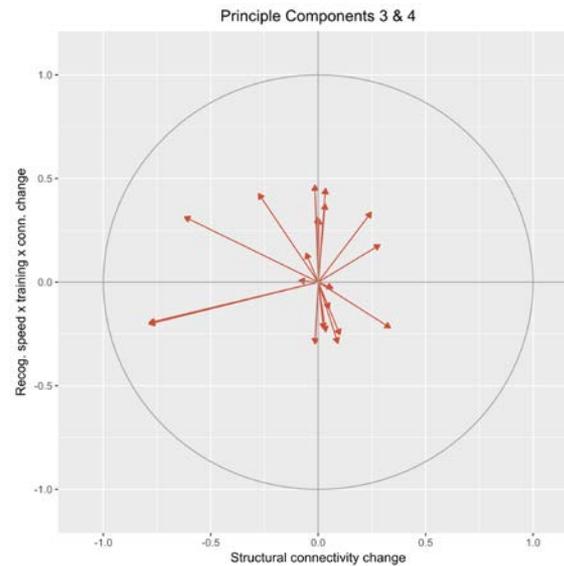

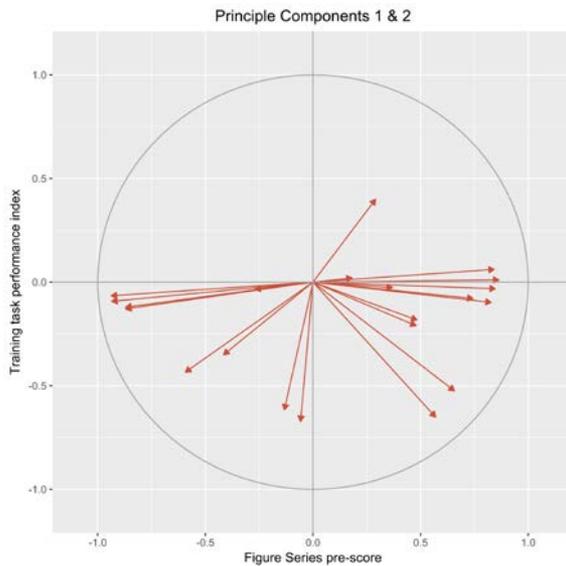

Figure Series

LSAT Reasoning

Figure Series

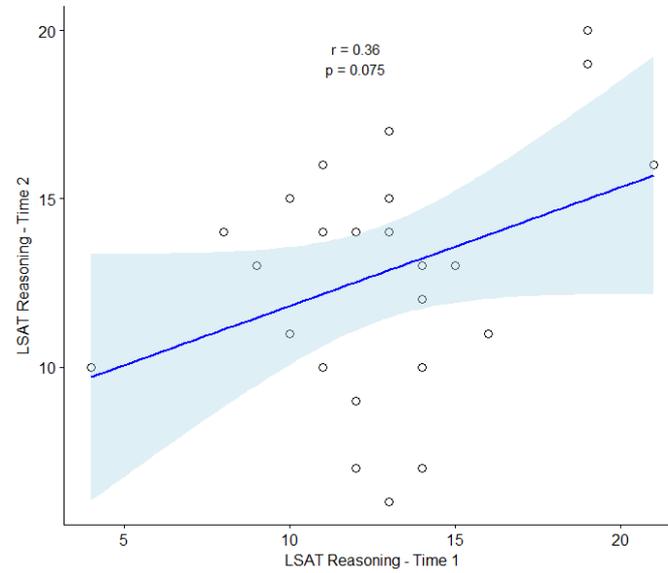

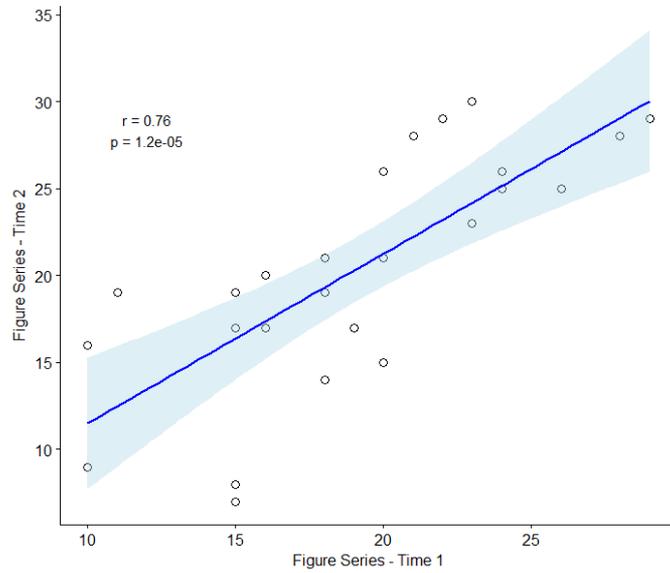

First 7 PCs explain over 93% of variance

1. Latent recognition speed
2. Latent ability to recognize unfamiliar objects/symbols
3. Speed of progression through the test battery
4. Age related improvements in object recognition
5. Trade-offs in effort for one test vs. another
6. Specialization for visual vs. verbal processing
7. Age related declines in processing ability

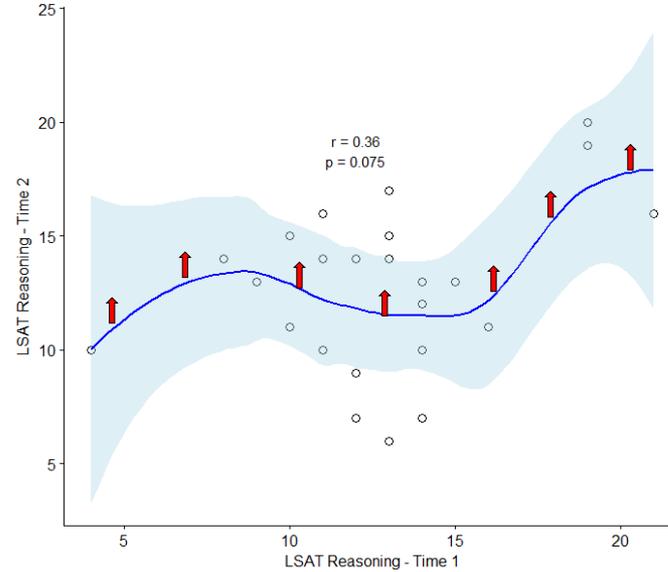

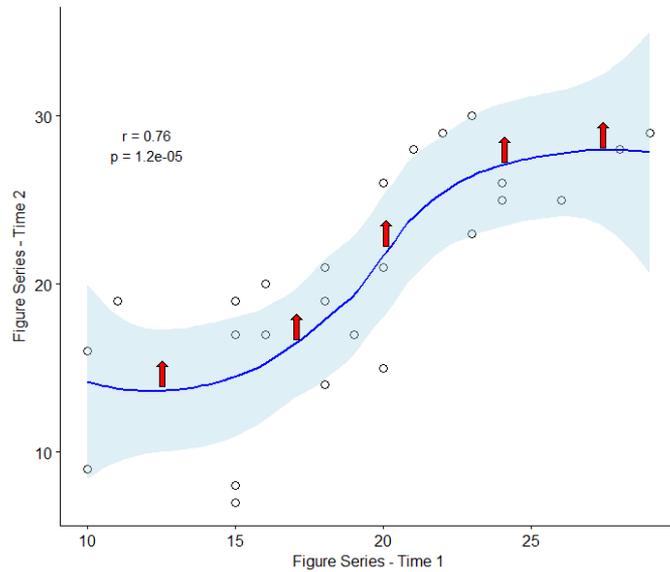

Figure Series

LSAT Reasoning

Linear

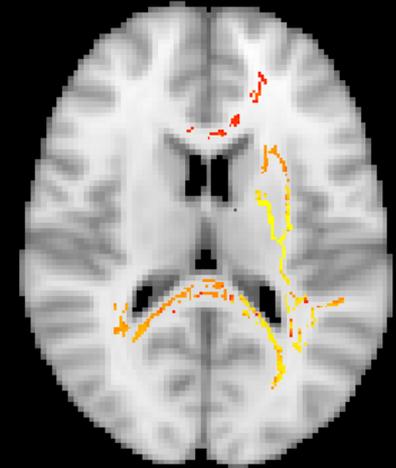

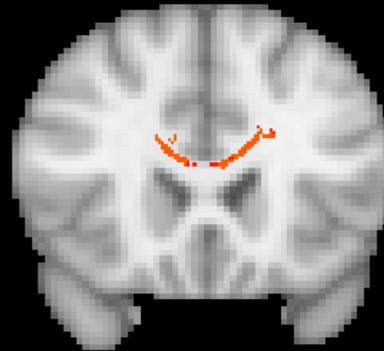

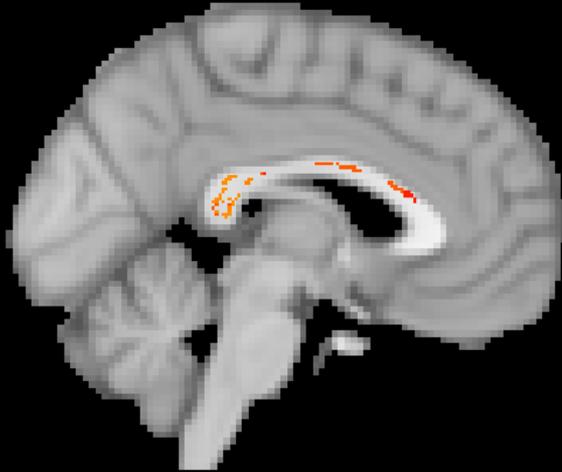

Loess

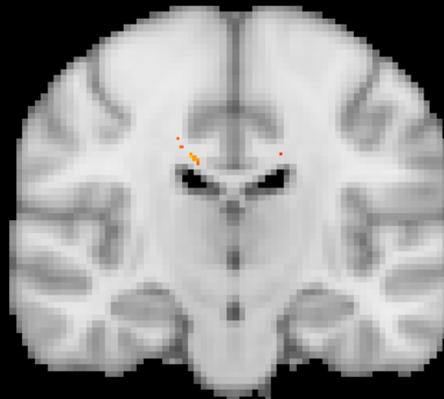

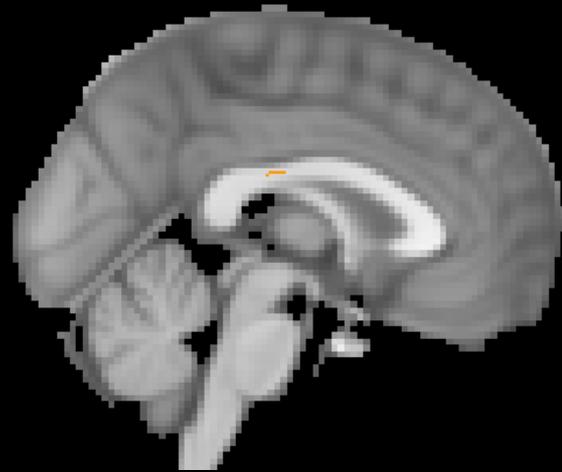

Pre-Intervention FA (t-test, sample split)

$\alpha < 0.1$

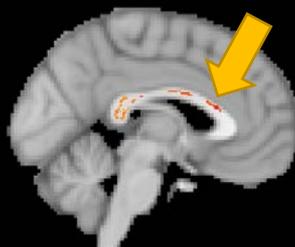

Post-Intervention FA (t-test, sample split)

$\alpha < 0.1$

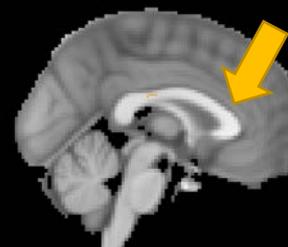

$\alpha < 0.1$

Pre

Post

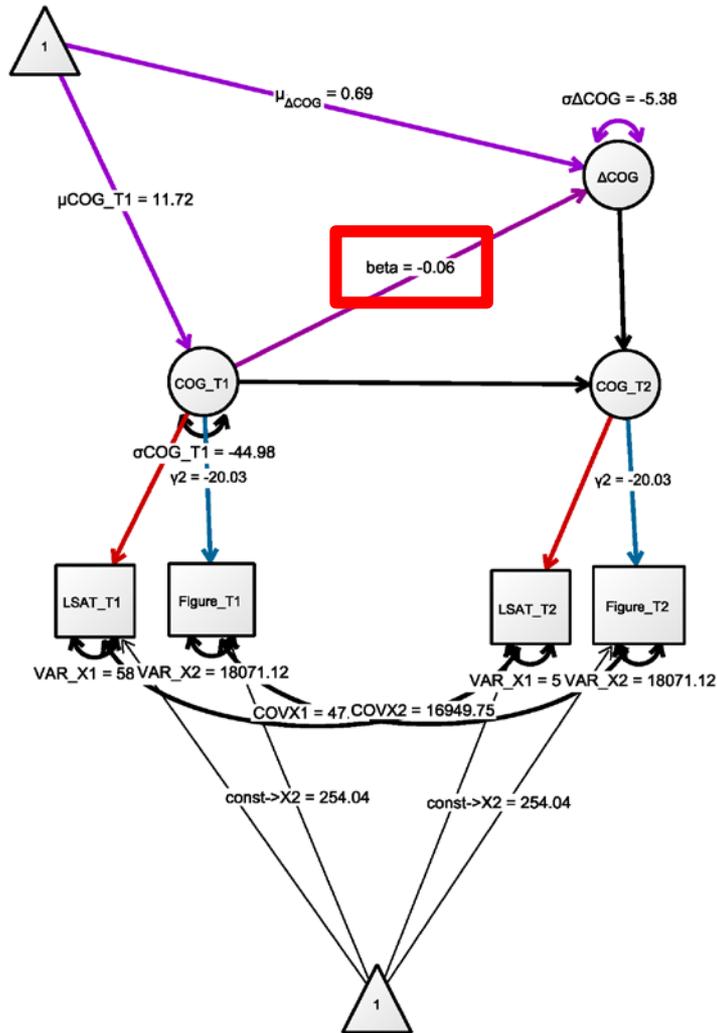

Regression using FA - caudal anterior & posterior cingulate cortices

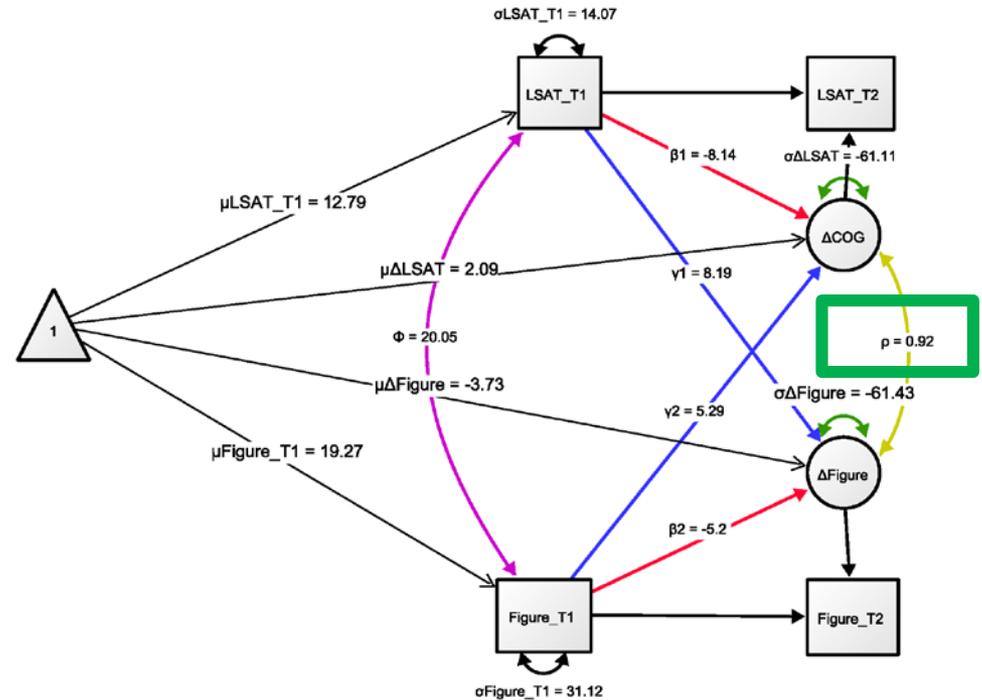

Coefficients

	Estimate	<i>t</i> -value	<i>p</i> -value
<i>(Intercept)</i>	-16.43	-1.18	0.26
Figure Series pre-score	1.04	5.51	< 0.01 ***
Training task performance index	2672.39	1.38	0.19
Structural connectivity change	0.02	2.60	0.02 *
Recog. speed \times training \times conn. change	-1.81	-2.59	0.03 *
Unfamiliar recog. ability \times training \times conn. change	-0.39	-0.80	0.44
Age related visual recog. \times training \times conn. change	-1.35	-2.43	0.03 *
Visual specialization \times training \times conn. change	2.09	0.67	0.52
Age related processing \times training \times conn. change	-1.58	-1.76	0.11
Recognition speed	0.23	2.51	0.03 *
Ability to recognize unfamiliar objects	0.16	1.78	0.10
Age related improvements in visual recog.	0.24	2.56	0.03 *
Specialty for visual vs. verbal processing	-0.45	-1.34	0.21
Age related decreases in processing ability	0.14	1.42	0.18

Latent Change Model (COG)¹

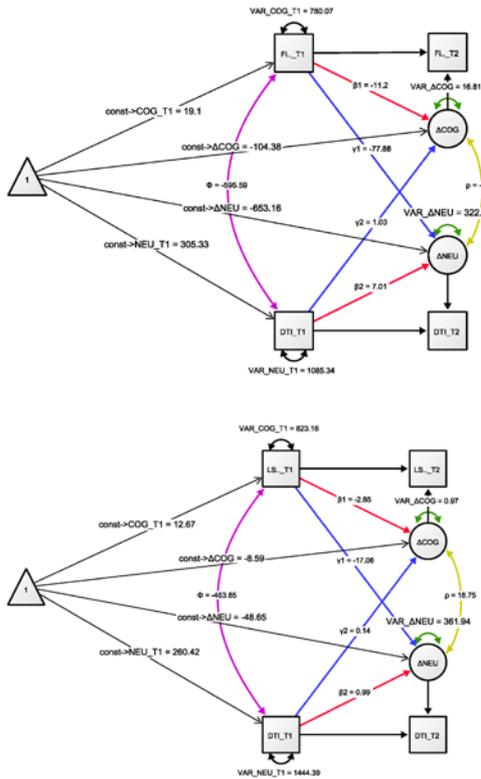

Correlated Latent Change Model (COG)²

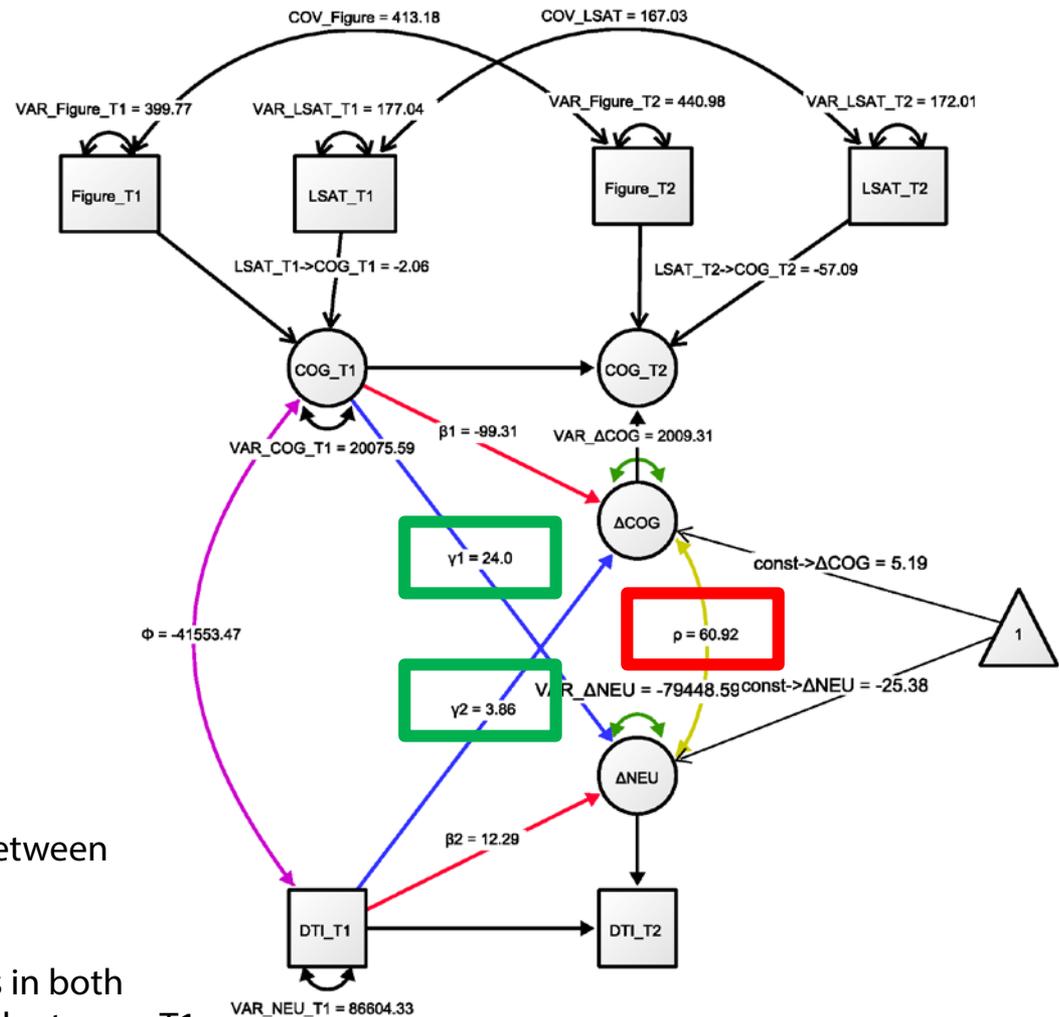

¹ Significant negative beta: Lower T1 COG scores = greater positive change in COG scores

² Significant positive rho: changes in both LSAT and Figure Series are correlated with each other (when controlling for all other variables)

Separate Measures^{1a,b}

Combined Measures²

² Significant positive rho: Correlated changes between cognitive and neuro latent variables

² Significant cross-couplings (gamma): Changes in both cognitive and neuro latent variables are dependent upon T1 neuro and cognitive scores, respectively

QUESTIONS
